

Varsity Voices — Ratings Reference

What each number on the dashboard is and where it comes from.

State Rank

Source: Received from maxpreps.com

MaxPreps' computer ranking of every Mississippi team, all classifications combined. We display the number as-is; it updates whenever we re-scrape MaxPreps.

MaxPreps also publishes a classification rank and a national rank for each team. We collect both but do not currently display them.

SCRN Power Ranking

Source: Calculated by us from final scores

Each team's rating starts as its average scoring margin per game, with any single-game margin capped at 28 points so blowouts don't distort it.

We then add the average rating of the team's opponents and recalculate 25 times, so strength of schedule works its way into every rating.

Teams are sorted by final rating. Shown two ways: rank among all teams, and rank within the team's classification.

Offensive Efficiency (0–100)

Source: Calculated by us from MaxPreps team stats

The average of two percentiles, each measured against every Mississippi team: points scored per game, and yards gained per play.

Read it as a percentile: 58 means the offense grades out better than 58% of teams in the state. 100 is best.

Defensive Efficiency (0–100)

Source: Calculated by us from opponents' box scores

The average of two percentiles: points allowed per game, and yards allowed per game. The scale is flipped so 100 is still best.

MaxPreps does not publish defensive yardage, so we rebuild it from each opponent's box scores. The note "12 of 14 games charted" means 12 of the team's games had box scores complete enough to use.

If fewer than half a team's games can be charted, the index uses points allowed only. If points allowed is unavailable, the card shows n/a.

Playoff Probability

Source: Calculated by us from schedules and scores

We simulate every remaining region game 2,000 times. In each simulation, a game's winner is drawn from the two teams' scoring-margin gap (about a 7-point edge equals a 73% win chance).

The top 4 teams in each region qualify. The percentage shown is the share of simulations in which the team finishes top 4.

Passer Rating

Source: Received from maxpreps.com

MaxPreps computes it with the NFL passer rating formula: completion percentage, yards per attempt, touchdown percentage, and interception percentage, each capped, on a 0–158.3 scale. We verified their published numbers match that formula exactly.

Leaderboard “Efficiency” Category

Source: Rate stats received from maxpreps.com

QB: passer rating, minimum 50 attempts. RB: yards per carry, minimum 50 attempts. WR: yards per reception, minimum 20 receptions.

The minimums keep low-volume players from topping the list.

PPG and PA/G

Source: Calculated by us from MaxPreps scores

Points scored (PPG) or allowed (PA/G) divided by games played.
